

NYPRO SPA | | Microchanneling Post-Care

1. If any Microchannel Delivery Solution (roll-on formula) remains, do apply continually until the supply is gone.
2. No other products should be applied until the following day.
3. When the numbing of your skin subsides, you may begin to feel a sensation similar to a mild sunburn. This is normal, however, you may apply cool compresses for your own relief.
4. Needle lengths of 0.25mm to 0.5mm will likely result in mild redness and swelling for up to 24 hours.
5. Needle lengths of of 1mm to 1.5mm will result in redness and swelling for up to 72 hours.
6. Apply the serum, as advised by your esthetician, as often as suggested.
7. Peeling and skin sloughing may occur for several days post-treatment.
8. Due to trans-epidermal water loss, which is a common side effect, your skin may feel dry. You are recommended to apply a moisturizer throughout the day and as frequently as necessary to avoid dryness. It is highly recommended that you utilize the moisturizer recommended by your esthetician.
9. It is important that you return for a follow-up treatment a month from your most recent treatment, or as recommended.

Note: If prolonged irritation occurs or if you have any questions at all, please contact **Homayra Razawi** by text, call, or email.
